RE: Docket No. 2005-385-E, Order No. 2006-680

Dear Sir:

We are completely in favor of allowing net metering in our State. The sooner this can be implemented state-wide, the better off we will all be.

Net metering will allow individuals and companies to develop other means of generating electricity besides using nuclear and fossil fuel technologies. Every little bit that can be put into the electrical system using solar, wind or other yet unknown technologies greatly benefits our society in many ways. New jobs will be available as new businesses spring up to meet this new opportunity. Our overall reliance on foreign oil will diminish. Reductions to carbon emissions into the atmosphere will help reduce pollution and maybe lessen the threat of global warming.

Net metering is being done in many other states and should be done in South Carolina. The knowledge to implement net metering is already available and should be implemented immediately.

Last year we called our Newberry Electric Coop to ask if it was possible to sell electricity back to them. They told us that it was against the law. We are very glad that this is now being considered and strongly urge you to allow this to happen.

Hoping for a brighter future with cleaner, less expensive power!!

Sincerely,

/s/ Martin Kindred, /s/ Lauren Kindred
